## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 20 are rejected under 35 U.S.C. 102(b) as being anticipated by BATSON 5,614,813.

Regarding claims 1, 20.

BATSON discloses a power generator system comprising:

a power module (12) for receiving an electrical energy input and generating an electrical energy output, the power module having a digital control input;

a sensor module (26) for monitoring the output of the power module, the sensor module having a digital sensor output and generating a digital sensor signal on the digital sensor output that varies in accordance with the electrical energy output; and

a control module (24) having a digital measurement input for receiving the sensor signal, the control module determining parameters that vary in accordance with the electrical energy output, the control module including a digital control output connected to the digital

control input, the control module generating a control signal applied to the digital control input for controlling the power module (12).

*Allowable Subject Matter*

3. Claims 9-19 allowed.
4. Claims 2-8, 21-24 objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
5. The following is a statement of reasons for the indication of allowable subject matter: the prior art does not or suggest to disclose a power generator as claimed by the Applicant operating in combination with an impedance matching network, an output sensor, communication interface and a controller varying the output power of the power generator in the manner the Applicant claims.
